JORDAN CHEN

[!] COMPUTER INFORMATION SYSTEMS STUDENT @ University of South Carolina

Exploring cybersecurity, web development, and hands-on technology experiences while building toward a career in information security.

USC MCEC School

B.S. Computer Science | Class of 2028

Graduation

May 2028

Focus Areas

Cybersecurity • Network Security • Web Applications

Affiliations

USC TrojanSec (CTF Team), USC Powerlifting

Jordan is a third-year undergraduate pursuing a career in security orchestration. His research interests focus on system isolation constraints and binary vulnerability mapping. Currently training for national collegiate CTF platforms.

systemctl status --focus

[+] CURRENT ENGAGEMENTS

1. Cybersec Auditing & Pentesting

HIGH PRIOR

Automating reverse engineering pipelines for IoT firmware. Crafting static analysis tools to capture stack overflows before production binaries compile.

2. Secure Web Architectures

CORE

Building lightweight, high-performance APIs leveraging Rust and WebAssembly. Designing zero-knowledge credential pipelines with custom proof mechanics.

3. Fitness & Hobbies

STATUS: NOMINAL

Active competitor in USC Powerlifting club. Passionate about procedural generative music design and real-time mechanical keyboard optimization.

src/projects/aegis-sandbox.git

Personal Portfolio Website

Rust / Kernel / Security

An isolation engine enforcing syscall execution policy limitations using custom seccomp profiles. Reduces the memory threat footprint of multi-tenant microservices down to <10MB. Deployed dynamically on sandbox instances.

142 commits

[View Source]

src/projects/trojan-auth.git

CSCE 242 Web Applications Assignments

C++ / Cryptography

Implemented a fully self-sovereign authentication layer for campus networks. Leverages AES-256 GCM packet payloads alongside decentralized challenge-response handshakes to eliminate persistent MITM risks.

89 commits
